Dataset
Both signed rays start from the same gray baseline and use the same z₀ origin and z₁ target.
All nine models are present. Seed population SD is in endpoint_summary.csv, not overplotted.
No steering baseline (ray vertex)
Signed + ray: cos(z₀ + αd, z₁)
Signed − ray: cos(z₀ − αd, z₁)
Linear (constrained L1)
Linear (constrained Step-L0)
Linear (constrained sigmoid-L0)
ReLU (penalized)
JumpReLU (penalized)
TopK (penalized)
